

**Resources for Compliance with Sec. 28-5.23
Landscaping and Screening**

Michigan Native Species Sources

Section 28-5.23 of the Watertown Charter Township Zoning Ordinance requires that at least 75% of species required in landscaping buffers be species which are native to Michigan:

F. Minimum material and planting standards:

ii. All plantings shall contain a minimum of 75 percent native species, as determined by generally accepted sources and approved by the planning commission or zoning administrator. All plantings shall be properly planted so that they are in a healthy, growing condition. Required plantings shall be maintained in an attractive and presentable condition, free of weeds, refuse, and debris. All plantings shall be maintained in a sound, healthy, and vigorous growing condition.

The following list of web resources are provided to act as a guide to contractors, landscape architects and business owners to consider when designing required landscaping. This resource is not meant to serve as an exhaustive list, other sources and species will be considered by the Planning Commission and Zoning Administrator.
